

Beech Burlap

Plank Size: 1/2" x 5-3/4" x 72" (RL) Average Length = 60" with 60% of square footage being full-length pieces. The planks are constructed of a hardwood sawn wear layer over a multi-layer cross-banded environmentally friendly Rubber wood fillet core. (Rubber wood is classified as a hardwood and is a plantation grown wood that is "recovered" after a 25-year useful life of producing latex). This core provides a stabilizing feature during seasonal climate changes.

Finish: 6 total coats of UV-Acrylic filled finish, including 2 top coats of hardened scratch resistant urethane and a anti-abrasive sealer coat. This finish meets all ISO 9001 and European Union E1 quality assurance standards while eliminating solvents and/or formaldehydes.

Installation: Your choice of glue down, floating or staple/nail over most surfaces and on any grade. With proper moisture controls, can be used in bathrooms and kitchens.

Residential Warranty: Limited lifetime guarantee against manufacturing defects and limited 30-year residential finish wear through warranty to original purchaser.

CAUTION: Extremely dry environments will damage any wood, bamboo or cork. Humidifiers must be used in buildings with relative humidity below 25% or the wear layer may split or crack. This is not considered a manufacturing defect. For more information, please call toll free(866) 593-4454
